

"I like the idea of creating custom solutions, but if it's faster, I just buy it."

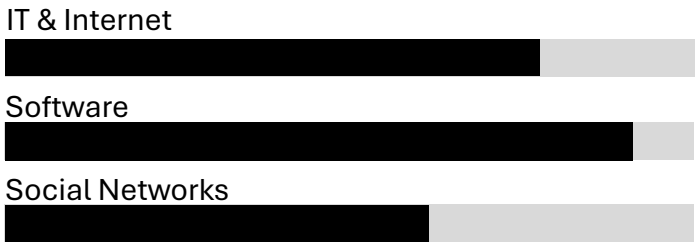

AGE	45
OCCUPATION	Mechanical Engineer
STATUS	Married, 1 child
LOCATION	Germany

Practical	Efficiency-driven
Solution-oriented	Cost-aware

Bio

Daniel works as a project manager in an engineering company and is used to solving practical problems efficiently. In his daily work, he often encounters small challenges where simple tools, holders, or custom parts would make processes easier. He has heard about 3D printing and finds it useful, especially for functional solutions, but he does not own a printer himself. However, he occasionally has access to one through colleagues or a local makerspace. In his free time, he enjoys optimizing things around the house, and improving workflows.

Technology

Brands

Frustrations

- unclear difference between "download file" and "buy product"
- too many technical steps (file formats, printer settings)
- complicated ordering process

Goals

- quickly find practical solutions for real problems
- choose between "buy" or "print" depending on effort vs. cost
- minimal time investment
